Reference: RAMTEK Purchase

Background: This has been an ongoing effort since June to provide adequate spare parts. The initial assessment by KGS was that the RAMTEK 6412 and their current terminals only required the four spare boards for complete backup. They misread the model number and require a much longer list of parts. This is a case of the cost of the parts exceed the price of the whole. The \$14K is currently decommitted from the XEROX contract with ORD. ORD was where the four spare boards came from, so the change to buying a full RAMTEK was easy.

Thanks.
